SUMMARY

Software engineer with production experience building and troubleshooting cloud-based integrations, data pipelines, and full-stack applications. Skilled at diagnosing complex, cross-system production issues (AWS, Salesforce, third-party APIs) and shipping end-to-end features from data model to UI. M.S. in Computer Science from UNC Charlotte.

PROFESSIONAL EXPERIENCE

Bridge Investment Group

Software Engineer

Charlotte, NC

February 2026 – Present

- Diagnosed and resolved production data-sync failures across a fleet of AWS Lambda integrations connecting Salesforce to third-party property-management vendors, fixing live-vs-deployed code drift, Salesforce connection-pooling failures on large paginated queries, and vendor-export parsing bugs.
- Designed and shipped a Deferred Work Items feature end-to-end — including a new Salesforce data model (Apex class changes, updates to the Deferred Work Item and Line Item objects, and a new Deferred Work Item Lifecycle Event object to track item history) and client-side schema migrations/UI within HomeWyze, an existing offline-first SvelteKit PWA (SQLite/WASM) — then led incident response when a related schema change caused stuck field submissions: patched and redeployed the affected Lambda, recovered lost data via Step Functions re-execution, and built a PWA update-detection service to auto-refresh stale client code and prevent recurrence.
- Monitor and maintain AWS Batch job scheduling across integration pipelines — diagnosed a queue-wide outage where a job definition's memory requirement silently exceeded all attached compute environments' capacity, blocking ~290 queued jobs; resolved it and built a new EventBridge/SNS alert rule to catch this failure mode automatically going forward. Separately traced a rogue recurring job to an undocumented trigger via CloudTrail event correlation.
- Designed and shipped a bulk photo-export feature for a property inspection platform end-to-end — a Lightning Web Component and Apex integration layer (dynamic sandbox/prod routing, synchronous callouts, structured error handling) calling an AWS Lambda that concurrently downloads and archives cloud-stored photos (ThreadPoolExecutor, S3, presigned URLs).
- Diagnosed and fixed data-integrity bugs in a production AR/bad-debt reporting pipeline during a 5-market onboarding, including a cross-market data leak, a hardcoded column-index bug dropping all records for newly onboarded markets, and a logic error excluding an entire aging bucket from bad-debt eligibility company-wide.

PROJECTS

CLT Events

Node.js, Express, MongoDB, EJS

- Developed a full-stack web application for event creation, browsing, RSVP management, and user profile handling using Node.js, Express.js, and MongoDB.
- Implemented secure user authentication with hashed password verification, session tracking via express-session, and persistent login state stored in connect-mongo.
- Built comprehensive CRUD features for events, including image upload handling, date/time validation, category filtering, and RSVP restrictions to maintain event integrity.
- Designed a personalized profile dashboard displaying hosted events and RSVP history by aggregating and populating related MongoDB collections.
- Utilized EJS templating for dynamic server-side rendering, delivering a responsive, user-friendly interface with real-time feedback via connect-flash messages.
- Applied robust error handling and access control, preventing unauthorized event edits, invalid RSVPs, and duplicate account registration.

EDUCATION

University of North Carolina at Charlotte

M.S. in Computer Science, Magna Cum Laude

May 2024 – August 2025

University of North Carolina at Charlotte

B.S. in Computer Science, Cum Laude

January 2023 – December 2024

Central Piedmont Community College

Associate of Arts

August 2018 – May 2022

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, C, HTML, CSS, SQL

Cloud & Backend: AWS Lambda, Amazon EventBridge, S3, Step Functions, API Gateway, AWS Batch, Amazon DynamoDB, AWS CDK, PostgreSQL, MongoDB

Integration/Data: Salesforce, SOQL, Apex, Salesforce Bulk API 2.0, Lightning Web Components (LWC), REST API Integration, ETL/Data Pipelines

Frameworks: React, Node.js, Express
